Professional Summary

Full Stack MERN Developer focused on building web applications with JavaScript, TypeScript, React, Node.js, Express, and MongoDB. Hands-on project experience developing REST APIs, role-based authentication, appointment and order workflows, and payment integrations. Familiar with API validation, error handling, database schema design, and maintainable backend structure. Seeking a junior or entry-level software development role to contribute to reliable web products and grow as an engineer.

Technical Skills

Languages: JavaScript (ES6+), TypeScript, SQL
Frontend: React.js, React Hooks, React Router, Redux Toolkit, Tailwind CSS, Responsive Design
Backend: Node.js, Express.js, REST APIs, Middleware, Authentication, Authorization
Databases: MongoDB, Mongoose, PostgreSQL, Schema Design, Indexing
Security and Integrations: JWT, Role-Based Access Control, Stripe, Razorpay, Google OAuth, Axios
Tools and Concepts: Git, GitHub, Postman, Environment Variables, MVC, Clean Architecture

Projects

MediConnect – Healthcare Appointment Platform *MERN Stack*
Live demo: mediconnectportal.site | *GitHub:* Frontend repository | Backend repository

- Built patient, doctor, and admin workflows for doctor discovery, professional verification, availability management, appointment booking, and appointment history. Designed and implemented REST APIs for authentication, doctor verification, appointment scheduling, and payment workflows using Node.js and Express.
- Structured the TypeScript backend with Clean Architecture, use cases, repository abstractions, DTOs, and dependency injection to separate business logic from infrastructure.
- Implemented JWT access/refresh-token authentication, Google OAuth, email OTP workflows, and role-based access control; added availability checks and database safeguards to help prevent double booking.
- Integrated Stripe payment flows and webhook handling, and developed MongoDB/Mongoose persistence with request validation and centralized error handling.
- Built real-time chat with Socket.IO and WebRTC signaling for video consultations; also worked on prescription, notification, wallet, and transaction workflows.

Shopiz – E-commerce Web Application *MERN Stack*

- Developed an e-commerce application with a catalog of 500+ products, cart and checkout workflows, order management, and admin product/category controls.
- Built REST APIs for authentication, product management, cart operations, and order processing; implemented protected routes and session-based authorization.
- Integrated Razorpay checkout and payment verification, and used MongoDB indexing/query improvements to support data retrieval.
- Live demo: shopiz.site | GitHub: Shopiz repository.

Imvera – Image Gallery *React, TypeScript, Node.js, MongoDB, AWS S3*
Live demo: imvera-frontend.onrender.com

- Developing an image gallery with a TypeScript-based React frontend and an Express backend organized around Clean Architecture principles.
- Implemented an S3-backed file-storage integration and centralized API response/error-handling utilities.

Education and Training

M.Sc. Computer Science – Mahatma Gandhi University, Kerala
B.Sc. Computer Science – Mahatma Gandhi University, Kerala
MERN Stack Development Program – Brototype, Kochi (Jan 2024 – Present)

Problem Solving

Solved 150+ problems on LeetCode, strengthening data structures, algorithms, and JavaScript problem-solving skills.
